

# National Peer Educator Study

## NPES National Report 2022-23

### Authors

Jacob D. Lemon, Ph.D.  
Project Manager

Matthew R. Wawrzynski, Ph.D.  
Director & Principal Investigator

## Welcome from the Director

Thank you for taking part in the National Peer Educator Study, sponsored by Michigan State University and the Health, Safety, and Well-being Initiatives of the National Association of Student Personnel Administrators (NASPA). This year marks the 18th year of the National Peer Educator Survey (NPES), which we launched as part of the national study to provide evidence-based scholarship on outcomes associated with being a peer educator on a college or university campus. To date, undergraduate peer educators from more than 450 colleges and universities have participated in the survey nationally, with many participating regularly since we first started collecting data. Thank you for your assistance in encouraging your peer educators to respond to the NPES.

As we aim to provide accessible and innovative ways for advisors to view results of our survey, we have recently shifted to using Tableau software to provide an interactive dashboard for the 2022-23 NPES Institutional Reports. We hope you find the results of this report, along with the Tableau dashboard, informative and helpful in your efforts to assess information such as the influence of the peer educator experience on students in these roles, the training peer educators report they receive and where they may be engaged in educational initiatives without training, and recruitment strategies incorporating the motivations students cite for becoming a peer educator. We are always interested in your feedback, which can be sent to the NPES Research Team at [npes@naspa.org](mailto:npes@naspa.org).

Best wishes with your health and wellness efforts,

Matthew R. Wawrzynski  
National Peer Educator Study Director and Principal Investigator  
Associate Professor

## Brief Overview

College and university administrators have long recognized the pivotal role that peers play in student growth and development. As a result, postsecondary institutions have increasingly utilized peer educators, those students who are recruited and trained to mentor and support peers on sensitive topics, to enhance the lives of students. However, more research was needed to explore the positive outcomes associated with being a college peer educator.

With this goal in mind, the National Peer Educator Survey (NPES) was designed to provide large scale, evidence-based research on outcomes associated with being a college peer educator. Successfully pilot tested in 2004, over 4,000 undergraduate peer educators from more than 400 college and university campuses in the United States and beyond have participated in the survey. The NPES research team at Michigan State University coordinates the project with support from the Health, Safety, and Well-being (formerly BACCHUS) Initiatives of the National Association of Student Personnel Administrators (NASPA). As an institutional benefit of affiliation with the Health, Safety, and Well-being Initiatives of NASPA, peer education advisors can elect to have peer education groups participate in the study.

### The National Peer Educator Study Assesses the Following Information:

Peer educator self-reported learning outcomes within six specific learning domains consistent with Learning Reconsidered 2 (Keeling, 2006) and the Council for the Advancement of Standards (CAS, 2015).

Student motivations for becoming a peer educator.

The training peer educators receive and the topics they cover with students.

The demographics of peer educators.

A comparison of peer educator learning outcomes across the institutional Carnegie Classification system.

Student affairs professionals from over 400 different colleges and universities in the United States and abroad have participated in the National Peer Educator Study. Above, we provide a snapshot of some of the participating institutions in the United States.

## NPES Survey Timeline

### December

Advisors complete NPES registration through an online survey. Peer educator names and contact emails are submitted via Excel spreadsheet to the NPES research team.

### January

Additional advisors are registered at the NASPA Strategies. Further information and data from the NPES are provided at the conference.

### January - March

The NPES survey is sent out to peer educators. Data are collected to track student learning as the result of a peer educator experience.

### May - July

Participating institutions fulfilling requirements of the study will receive access to a Tableau dashboard featuring personalized data and insight for their peer educators.

The following is a guide on how to read the results the of report based on statistics highlighted in each section.

### Learning Domains

The NPES measures the self-reported learning domains of peer educators based on behaviors and competencies that students evaluate using a 5-point, Likert scale (1=Did not have to 5=Very strong) both before and as a result of their peer education experience. Each of the six learning domains in the report include a results section with several different elements.

#### Overview

At the top of the page, we provide the learning domain name along with a brief introduction. Next, a description of each outcome that comprises the learning domain is included. These outcomes serve as the actual questions in the NPES survey. A chart highlights the national results for the learning domain between Carnegie Classified institutional types. Finally, we include tips for improving and enhancing student development in the learning domain.

#### Results

The next several pages include the frequency and percent averages of the results for each outcome of the learning domains. Data are provided for both before and as a result of students becoming peer educators. At the end of the section, we offer several suggestions to advisors for further guiding and developing peer educators in each learning domain. Here are some helpful definitions for reading and understanding the results:

**Frequency:** The rate at which peer educators responded to a particular outcome question in the survey.

**Percent Average (%):** The sum of each frequency divided by the total number of frequencies in a sample, multiplied by 100.

## Training

The NPES measures the topics where peer educators receive training for their roles and how often they utilize their training to engage in educational-type activities with students. With this information, advisors can tailor training to meet the educational needs of their peer educators and campus communities.

### Overview and Results

An introduction of peer educator training is provided, followed by two graphics illustrating the national percentages of peer educators who received training in a variety of topics and how they engaged in those same topics.

The results for the training section are divided into two sections:

**Training Received:** This section indicates both the frequency and percentage of peer educators who received training in 26 different topic areas.

**Training Utilized:** This section is labeled with four different activities for how peer educators engaged with each topic area: (a) handed out information; (b) facilitated an educational program; (c) had an educational conversation; and (d) did not engage with topic at all. The section provides both frequency and percentage of peer educators who selected each activity. Please note that a total column is not provided because there may be instances where peer educators selected more than one activity, as the survey question asked them to “select all that apply.”

## Motivations

The NPES also measures students’ motivations for becoming peer educators. In the NPES survey, peer educators are asked to rate their level of influence for each motivational factor on a Likert-type scale (1=Did not influence my decision; 2=Had very little influence; 3=Influenced; 4=Greatly influenced).

### Overview and Results

At the top of the section, we provide the the number of participants and the name of the institution. Below are the results for the institution followed by the national averages for motivations. The results use valid percent averages for each motivational factor.

**Valid Percentage:** An average of each frequency divided by the total number of valid frequencies in a sample. A valid percentage excludes peer educators who did not answer the a survey question in order to report the sum total of responses to equal 100%.

## Demographics

The NPES tracks demographic information self-reported by peer educators to better understand the characteristics of students who participate in these roles.

### Results

The demographics section includes frequency and percent averages of the results for each demographic. The final subsection also includes mean and standard deviation. Here are some definitions for reading and understanding the demographic results:

**Frequency (N):** The rate at which peer educators responded to a particular question in the survey.

**Percent Average (%):** The sum of each frequency divided by the total number of frequencies in a sample, multiplied by 100.

**Mean:** An average of values; the sum of all the sampled values divided by the total number of sampled values.

**Standard Deviation:** A quantity calculated to indicate the dispersion of a set of values.

## Benefits for Advisors:

Advisors and student affairs professionals who work with peer educators have benefited greatly from information and insights provided by data from the NPES. With detailed outcomes and metrics, the NPES provides evidence peer education programs are beneficial to students who participate as peer educators. As a result, advisors can expand their programs and bolster efforts to recruit high quality peer educators. Justifying initiatives and accreditation reviews, the NPES serves as a powerful tool for advisors as they continue to promote peer education on their college or university campuses.

# Practical Competence

Practical competence involves the development of knowledge and skills that enable an individual to achieve a balanced, productive, and socially responsible life (Keeling, 2006). Increasingly, students are encouraged to recognize how their decisions impact their personal wellness and professional success. The practical competence learning domain emphasizes the need for peer educators to be goal-oriented learners, skilled workers, and purposeful mentors.

The NPES measures practical competence with the following outcomes:

Measured by Carnegie Classification:

## Tips for improving Practical Competence

- Invite career services representatives for a workshop
- Create goal setting activities and timelines
- Work to relate peer educator work to career goals
- Provide opportunities for feedback and constructive criticism regarding presentations
- Create mock counseling sessions and provide feedback
- Ensure grounding in mission and values of peer educator work

	Total	210	100.0%	208	100.0%

## Areas for future development

Use one-on-one meetings and trainings to help students pursue their goals

Encourage peer educators to develop communication skills through presenting and dialogue

Engage peer educators to reflect their career goals by inviting a career professional to trainings

Teach students how to budget and plan ahead using program planning as a teaching tool

Incorporate an awareness for health and wellness into meetings and trainings

# Cognitive Complexity

Cognitive complexity includes the ability to analyze situations and adapt to problems with ideas or solutions (Keeling, 2006). When students reflect on their own knowledge and skills, they are better able to adapt to new situations or experiences, which contributes to success in college. The cognitive complexity learning domain emphasizes the importance of peer educators incorporating their knowledge and experiences to inform their approach to managing peer conflicts or issues.

The NPES measures cognitive complexity with the following outcomes:

Measured by Carnegie Classification:

## Tips for improving Cognitive Complexity

- Incorporate reflection activities into individual or group meetings
- Deconstruct peer educators' previous assumptions through dialogue circles, role playing, or case studies
- Provide students with theories that are easily understood and transferable in their daily work
- Utilize puzzles or problems to help facilitate or enhance critical thinking skills
- Seek peer educators' feedback regarding health and wellness issues they notice with students
- Ask peer educators to brainstorm new ideas for programs, projects, and peer-to-peer conversations

# Results for Practical Competence

		Before becoming a peer educator		As a result of becoming a peer educator

	Very strong	32	15.2%	94	45.4%
	Total	211	100.0%	207	100.0%

## Areas for future development

Require peer educators to support their beliefs with evidence

Encourage peer educators to be innovative problem solvers by simulating issues using case studies

Teach students how to locate and utilize campus and online resources when making decisions or taking action on an issue

Motivate peer educators to be creative and think beyond the scope of health education to solve problems

Ask peer educators about their ideas, assumptions, and opinions when working with them

# Intrapersonal Development

Intrapersonal development encompasses the capacity to reflect on beliefs, values, and goals in order to develop a clear understanding of oneself (Keeling, 2006). College students often find themselves in a developmental stage where they learn about who they are as individuals and explore their own ways of thinking about the world (Baxter Magolda, 2001). The intrapersonal development learning domain represents peer educators’ ability to align their own goals and values with wellness and positive decision-making.

The NPES measures intrapersonal development with the following outcomes:

Measured by Carnegie Classification:

## Tips for improving Intrapersonal Development

- Use written reflection tools (e.g., journals, blogs)
- Lead reflective activities that include group conversations, one-on-one meetings, and silent reflection
- Provide space for students to discuss and reflect along religious and spiritual dimensions
- Facilitate values exercises to help articulate values throughout one’s life and peer educator position
- Incorporate readings about values into peer educator work
- Designate tasks with the goal of encouraging peer educators to build confidence and independence

# Results for Intrapersonal Development

	Total	210	100.0%	207	100.0%

## Areas for future development

Ask peer educators to realistically assess their strengths and weaknesses

Put systems in place that hold peer educators accountable for their personal actions and decisions

Encourage peer educators to reflect on their values, goals, and positions both personally and professionally

Help peer educators explore their personal, spiritual, and individual beliefs

Incorporate group dialogue focused on ethical situations

# Interpersonal Development

Interpersonal development is the ability to manage relationships and collaborate with others to achieve mutual goals (Keeling, 2006). Through interacting with others in college, students gain abilities to see perspectives different from their own, which contributes to leadership development (Mayhew et al., 2016). The interpersonal development learning domain encompasses meaningful peer-to-peer connections developed by peer educators in helping others through sensitive issues or problems.

The NPES measures interpersonal development with the following outcomes:

Measured by Carnegie Classification:

## Tips for improving Interpersonal Development

- Practice scenarios that peer educators encounter during conversations with peers (e.g., Behind Closed Doors)
- Analyze case studies with peer educator groups and then present the solutions all together
- Incorporate time for wellness in group activities (i.e., role modeling healthy choices)
- Facilitate teamwork activities and team builders
- Hold an active listening workshop to ensure feedback is part of the peer educator process
- Provide the time and space to share best practices

## Areas for future development

Provide opportunities for peer educators to bond with one another

Frequently engage peer educators in activities related to diversity and inclusion

Encourage group goal-setting at the beginning of the year and check-in periodically about reaching those goals

Empower peer educators to lead activities and conversations

Frequently divide peer educators into small groups or pairs when appropriate

# Knowledge Acquisition, Construction, Integration, and Application

Knowledge acquisition, construction, integration, and application is the capacity to develop intellectual skills through the integration of knowledge, ideas, and information (Keeling, 2006). Colleges and universities empower students to master intellectual and practical skills through a process of connecting together knowledge and experiences, which underpins the learning process (AAC&U, 2002). The knowledge acquisition learning domain encourages peer educators to utilize knowledge and campus resources to help students solve problems.

The NPES measures knowledge acquisition, construction, integration, and application with the following outcomes:

Measured by Carnegie Classification:

## Tips for improving Knowledge Acquisition, Construction, Integration, and Application

- Coordinate information or training sessions/workshops with campus partners
- Invite academic affairs partners to meetings, facilitate trainings, or partner on programs
- Introduce peer educators to scholarship in the student affairs, counseling, and psychology fields
- Examine work as it relates to existing literature and critique for its alignment with best practice
- Ask peer educators to research ways to support students with health and wellness concerns
- Partner with counseling services on campus to organize a referral plan for peer educators

## Areas for future development

Encourage peer educators to examine and critique health related literature

Have peer educators create educational pamphlets, posters, flyers, blog posts, or newsletters integrating numerous sources

Create learning contracts for peer educators to connect the relevant knowledge and skills gained to future goals/aspirations

Acknowledge the relevance of class content associated with peer education work

Ask peer educators to connect content from trainings and meetings to their own experiences

# Humanitarianism and Civic Engagement

Humanitarianism and civic engagement encompasses the ability to consider others’ perspectives and the outlook of the broader community when engaging in decisions and actions (Keeling, 2006). As colleges and universities strive to serve society and produce civically-minded leaders, community engagement has become an important outcome of higher education. The humanitarianism and civic engagement learning domain encourages peer educators to be inclusive and responsive to the needs of a campus community.

The NPES measures humanitarianism and civic engagement with the following outcomes:

Measured by Carnegie Classification:

## Tips for improving Humanitarianism and Civic Engagement

- Encourage peer educators to attend campus events to help them feel a part of the campus community
- Allow students to identify community partners from whom they can learn about the profession
- Organize volunteer opportunities with community partners
- Create space for conversations and reflection during group meetings
- Encourage peer educators to seek, receive, and reflect on feedback
- Incorporate social justice and multicultural training into work, training, and programming

## Areas for future development

Incorporate multicultural and social justice training into peer educator work

Teach peer educators how to track social dynamics in interactions and communicate when they feel emotionally triggered

Have peer educators research current events nationally and globally related to peer education or health and wellness

Share with peer educators facts about campus behavior and have them create a social norming campaign

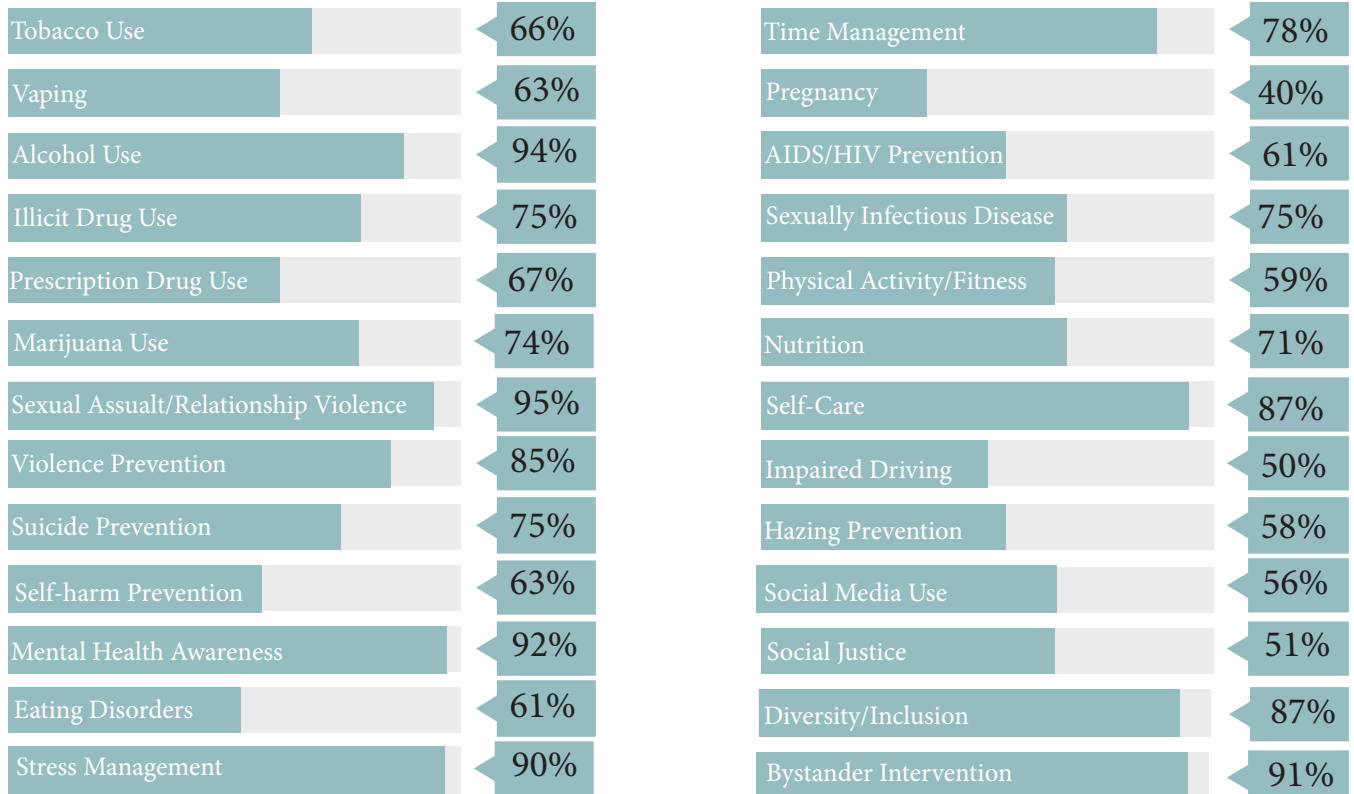

Collaborate with other peer educator groups in the community

# Training Received

The National Peer Educator Study tracks the training peer educators receive in their roles, which spans several aspects associated with students' health and wellness behaviors. Advisors are able to compare the types of training they offer peer educators with national averages to strategize ways to improve peer educator learning and development.

## Training Received National Averages:

## Tips for Training Peer Educators

Ask peer educators about the types of interactions they are having with students

Consider training topics that are salient to your campus community and the local, regional, or national discourse

Engage peer educators in reflecting about the training they receive and how they plan to utilize it in their roles

# Training Utilized

The National Peer Educator Study also assesses the ways that peer educators utilize the training they receive based on how they engage in the training topic with students. There may be times when advisors notice their peer educators are receiving training in a topic area but not utilizing it through engagement or educational activities. The NPES provides peer educators four different options of engagement for each training topic: (a) handed out information, (b) facilitated an educational program, (c) had an educational conversation, and (d) did not engage with the topic at all.

## Training Utilized National Averages:

## Tips for Engaging Peer Educators in their Training

Engage peer educators in reflecting on the mission and goals of their training

Encourage peer educators to help plan and facilitate training activities that relate directly to the work they are doing with students

Provide opportunities for peer educators to dialogue and reflect on the impact of their work with students

# Motivations for Becoming a Peer Educator

The National Peer Educator Study surveys peer educators about their motivations for becoming a peer educator. Over the years, NPES data have shown a higher percentage of students are motivated to become peer educators by intrinsic factors such as the desire to help others, gain additional knowledge, and get involved in college. Understanding college students' motivations for becoming a peer educator can help advisors improve their recruitment strategies and diversify their peer educator pool. Additionally, responding to goals and interests of current peer educators can bolster retention efforts.

## Factors Greatly Influencing Students to Become a Peer Educator:

## Tips for Using Motivations to Recruit Peer Educators

Create flyers showcasing the benefits of becoming a peer educator

Help peer educators see the results of the work they do on campus to help others in the community

Link peer educator experiences to the types of knowledge and skills needed for careers after graduation

## Motivations for Becoming a Peer Educator

	Greatly Influenced	Influenced	Had Very Little Influence	Did Not Influence My Decision

## Tips for Using Motivations to Retain Peer Educators

Invite peer educators to attend conferences and other professional development events where they can meet others and build skills

Encourage peer educators to mentor newer members in the organization

Engage in conversations with current peer educators about their goals for the position

# Peer Educator Demographics

The National Peer Educator Study assesses the demographic characteristics of peer educators. An interesting point in the data suggests many students wait until their junior or senior year of college to become peer educators. While peer educators overwhelmingly identify as White and female, the percentage of students joining peer education organizations are changing to become more diverse. The number of peer educators who identify as African American and Latino(a) have seen the greatest increases over the last decade. Finally, peer educators' residences has shifted from on-campus to off-campus over the last decade. As advisors understand the demographics of peer educators, they are better able to recruit, retain, mentor, and develop these students in their peer education programs.

## National Demographics at a Glance:

## Peer Educator Demographics

	National Averages	
	N	%
<b>Are you a certified peer educator through The BACCHUS Network CPE Training program?</b>		
Yes	107	51.9%
